MS950YM Silente Yellow Matte

Surfing has never been so silent. Since the first ride you can appreciate how hydrofoils are silent. Silente means efficiency. Efficiency grows performance and then more fun.

Several years passed since our first ride on Silente hydrofoil: there is no day that we stopped development in materials and process. The full carbon construction makes it a rigid, strong and durable hydrofoil. The base plate joint prevents delamination and offers a safer connection with board, even thanks to the new bushing. The shape of the Silente, together with its wings, make that foil very stable and easy to ride. For that reason we advise this hydrofoil to beginners and for free style.

The original graphic makes this foil not only great to ride but offers a beautiful look.

MT20CYM T20 Glass Red Matte

In years of kite foil riding we tried different foil boards. No board seems to fit perfectly the Silente hydrofoil features. So we developed our own board: the T20 board.

The design has the aim to obtain a board as strong as the Silente, but have to be light to transport and easy to take it into the water. The carbon fiber is the material that offer such features and our experience in producing it helped us to create the board that we dream.

The thickness helps the rider in free ride and wave use; the supplied footstraps, their position on a strong footpad, and the possibility to adjust them make it easier to ride the hydrofoil.

Four holes make it easy to join the Silente to the boards in a clean way. Their position is the result of several tests: we found the best position for control, stability and comfort.

Nothing is left to the chase: shape, dimensions, materials, and graphics are mixed together and the result is a unique board that allow to watch the emotions of flying over the see.

Different version of the T20 board are available. Moses want to offer to its customers the possibility of choose the optimal board that the rider request.

Ready for Silente

Footstrap position adjustable

Complete with 3 Moses Footstraps

High Grip Footpad

Amazing design

MT40CYM T40 Carbon Yellow Matte

The T40 board was developed with the aim to offer more buoyancy, but maintaining all of the features of T20 board. An improved buoyancy makes it easier to start and have better control at low speed. It is achieved with 40mm thickness and a larger width. Bigger dimensions lead to a better compromise between strength and weight. The right mix of carbon fiber and PVC foam allows to have the requested strength and maintain light weight. Thickness is chosen to keep agility in free ride and wave use. Stability, control and comfort are kept with adjustable footstraps, high grip footpad and the four holes to join Silente hydrofoil in the best position. The shape helps to take the board into the water.

The graphics makes, as with all of our products, a unique kite foiling experience.

Different versions of the T40 board are available. Moses wants to offer to its customers the ability to choose the optimal board that the rider requests.

Free Ride Front Wing – 425mm

Years of development and tests in order to obtain the best solution for Silente Hydrofoil. The Front Wing FR425 reach this aim: great stability, easy to ride and strong construction. The surface of this wing allows to have lift even at low speed. The shape offers a better distribution of forces for a better control. The structure in carbon fiber makes this wing strong, sturdy and durable. The new graphic completes this wing.

The result is a perfect wing for beginners, free ride use and in upwind condition.

425 mm

Perfect fit Silente Hydrofoil

Free Ride Front Wing – 450mm

The design is conceptually like the FR425 Front Wing: stable conduction, easy to ride and strong construction are pursued. The Free Ride Front Wing FR450 has a bigger surface for heavier people that need more lift at low speed. Performances doesn't change: same quality, same stability, same amazing design, same perfect matching with Silente Hydrofoil.

HIGH PERFORMANCE WING

High Performance Front Wing – 485mm

Recent interest in races and better speed performances move Moses to develop a series of High Performance front wing. The HP485 Front wing is the first wing of that series that perfectly fit Silente hydrofoil. The aim of the design is to reduce drag by reducing chord dimension, improve hydrodynamic efficiency by span dimension augmentation, and keep the easy to ride and stability features that characterize Silente Hydrofoil.

The carbon fiber structure make the wing very strong and rigid. No loss of quality and performance thanks to the high quality standards that Moses keep on their products.

Original graphics complete your kitefoil experience.

STABILIZERS

Stabilizer 270 mm

Surfing with an hydrofoil is impossible without the proper stabilizer. The Stabilizer 270mm is the rear wing that perfect fit the Silente hydrofoil, in terms of shape stability and control. The shape is optimal for Free ride use

MST270G - Glossy
MST270M - Matte

Fits Perfectly Silente Hydrofoil

Stabilizer 320 mm

High Performance wing needs the proper stabilizer that supplies the stability and control at higher speeds. This is the aim of the Stabilizer 320 mm: this rear wing keeps the high stability of Silente, with a reduction of drag that improves the efficiency of the whole hydrofoil.
